Assignment 3: Data Exploration

Mara Michel

Fall 2023

OVERVIEW

This exercise accompanies the lessons in Environmental Data Analytics on Data Exploration.

Directions

- 1. Rename this file <FirstLast>_A03_DataExploration.Rmd (replacing <FirstLast> with your first and last name).
- 2. Change "Student Name" on line 3 (above) with your name.
- 3. Work through the steps, **creating code and output** that fulfill each instruction.
- 4. Assign a useful name to each code chunk and include ample comments with your code.
- 5. Be sure to **answer the questions** in this assignment document.
- 6. When you have completed the assignment, **Knit** the text and code into a single PDF file.
- 7. After Knitting, submit the completed exercise (PDF file) to the dropbox in Sakai.

TIP: If your code extends past the page when knit, tidy your code by manually inserting line breaks.

TIP: If your code fails to knit, check that no install.packages() or View() commands exist in your code.

Set up your R session

1. Check your working directory, load necessary packages (tidyverse, lubridate), and upload two datasets: the ECOTOX neonicotinoid dataset (ECOTOX_Neonicotinoids_Insects_raw.csv) and the Niwot Ridge NEON dataset for litter and woody debris (NEON_NIWO_Litter_massdata_2018-08_raw.csv). Name these datasets "Neonics" and "Litter", respectively. Be sure to include the subcommand to read strings in as factors.

```
#Set up
library(here)
```

here() starts at C:/Users/marga/OneDrive/Documents/EDE Fall2023

```
#Import and rename Neonics and Litter datasets
Neonics <-read.csv(here('data','raw','ECOTOX_Neonicotinoids_Insects_raw.csv'),stringsAsFactors=TRUE)
Litter <-read.csv(here('data','raw','NEON_NIWO_Litter_massdata_2018-08_raw.csv'),stringsAsFactors=TRUE)</pre>
```

Learn about your system

2. The neonicotinoid dataset was collected from the Environmental Protection Agency's ECOTOX Knowledgebase, a database for ecotoxicology research. Neonicotinoids are a class of insecticides used widely in agriculture. The dataset that has been pulled includes all studies published on insects. Why might we be interested in the ecotoxicology of neonicotinoids on insects? Feel free to do a brief internet search if you feel you need more background information.

Answer: According to the NIH, neonicotinoids may have a negative impact on insects that are benefical and necessary to agriculture and our food systems, such as bees.

3. The Niwot Ridge litter and woody debris dataset was collected from the National Ecological Observatory Network, which collectively includes 81 aquatic and terrestrial sites across 20 ecoclimatic domains. 32 of these sites sample forest litter and woody debris, and we will focus on the Niwot Ridge long-term ecological research (LTER) station in Colorado. Why might we be interested in studying litter and woody debris that falls to the ground in forests? Feel free to do a brief internet search if you feel you need more background information.

Answer:According to the U.S. Forest Service, woody debris provides habitats for organisms, provides nutrients back to the soil, and stores carbon. It's important to understand the role that forest debris play in carbon accounting.

4. How is litter and woody debris sampled as part of the NEON network? Read the NEON_Litterfall_UserGuide.pdf document to learn more. List three pieces of salient information about the sampling methods here:

Answer: 1.Litter and woody debris is sampled via both elevated and ground traps. 2.Ground traps are sampled once per year but the frequency of sampling for elevated traps depends on their location and weather conditions. 3.In 2020, the number of elevated traps were reduced but the number of ground traps remained the same.

Obtain basic summaries of your data (Neonics)

5. What are the dimensions of the dataset?

```
#Check the number of columns and rows
ncol(Neonics)
## [1] 30
```

[1] 4623

nrow(Neonics)

```
#There are 30 columns and 4623 rows
```

6. Using the summary function on the "Effect" column, determine the most common effects that are studied. Why might these effects specifically be of interest?

summary(Neonics\$Effect)

##	Accumulation	Avoidance	Behavior	Biochemistry
##	12	102	360	11
##	Cell(s)	Development	<pre>Enzyme(s)</pre>	Feeding behavior
##	9	136	62	255
##	Genetics	Growth	Histology	Hormone(s)
##	82	38	5	1
##	Immunological	Intoxication	Morphology	Mortality
##	16	12	22	1493
##	Physiology	Population	Reproduction	
##	7	1803	197	

Answer: The most common effects studied are population (1803) and mortality (1493). When examining the effects of the insecticides, it would be important to study how they impact overall insect populations and how effective they are at killing insects, both intentionally and unintentionally.

7. Using the summary function, determine the six most commonly studied species in the dataset (common name). What do these species have in common, and why might they be of interest over other insects? Feel free to do a brief internet search for more information if needed.[TIP: The sort() command can sort the output of the summary command...]

sort(summary(Neonics\$Species.Common.Name))

##	Ant Family	Apple Maggot
##	9	9
##	Glasshouse Potato Wasp	Lacewing
##	10	10
##	Southern House Mosquito	Two Spotted Lady Beetle
##	10	10
##	Spotless Ladybird Beetle	Braconid Parasitoid
##	11	12
##	Common Thrip	Eastern Subterranean Termite
##	12	12
##	Jassid	Mite Order
##	12	12
##	Pea Aphid	Pond Wolf Spider
##	12	12
##	Armoured Scale Family	Diamondback Moth
##	13	13
##	Eulophid Wasp	Monarch Butterfly
##	13	13
##	Predatory Bug	Yellow Fever Mosquito
##	13	13
##	Corn Earworm	Green Peach Aphid
##	14	14
##	House Fly	Ox Beetle
##	14	14
##	Red Scale Parasite	Spined Soldier Bug
##	14	14
##	Western Flower Thrips	Hemlock Woolly Adelgid Lady Beetle

##	15	16
##	Hemlock Wooly Adelgid	Mite
##	16	16
##	Onion Thrip	Araneoid Spider Order
##	16	17
##	Bee Order	Egg Parasitoid
##	17	17
##	Insect Class	Moth And Butterfly Order
## ##	Ovetoreholl Scale Paracitoid	17
##	Oystershell Scale Parasitoid 17	Black-spotted Lady Beetle 18
##	Calico Scale	Fairyfly Parasitoid
##	18	18
##	Lady Beetle	Minute Parasitic Wasps
##	18	18
##	Mirid Bug	Mulberry Pyralid
##	18	18
##	Silkworm	Vedalia Beetle
##	18	18
##	Codling Moth	Flatheaded Appletree Borer
##	19	20
##	Horned Oak Gall Wasp	Leaf Beetle Family
##	20	20
##	Potato Leafhopper	Tooth-necked Fungus Beetle
##	20	20
##	Argentine Ant	Beetle
## ##	21 Mason Bee	21
##	22	Mosquito 22
##	Citrus Leafminer	Ladybird Beetle
##	23	23
##	Spider/Mite Class	Tobacco Flea Beetle
##	24	24
##	Chalcid Wasp	Convergent Lady Beetle
##	25	25
##	Stingless Bee	Ground Beetle Family
##	25	27
##	Rove Beetle Family	Tobacco Aphid
##	27	27
##	Scarab Beetle	Spring Tiphia
##	29	29
##	Thrip Order	Ladybird Beetle Family
## ##	29 Parasitoid	30 Braconid Wasp
##	30	33
##	Cotton Aphid	Predatory Mite
##	33	33
##	Sweetpotato Whitefly	Aphid Family
##	37	38
##	Cabbage Looper	Buff-tailed Bumblebee
##	38	39
##	True Bug Order	Sevenspotted Lady Beetle
##	45	46
##	Beetle Order	Snout Beetle Family, Weevil

##	47	47
##	Erythrina Gall Wasp	Parasitoid Wasp
##	49	51
##	Colorado Potato Beetle	Parastic Wasp
##	57	58
##	Asian Citrus Psyllid	Minute Pirate Bug
##	60	62
##	European Dark Bee	Wireworm
##	66	69
##	Euonymus Scale	Asian Lady Beetle
##	75	76
##	Japanese Beetle	Italian Honeybee
##	94	113
##	Bumble Bee	Carniolan Honey Bee
##	140	152
##	Buff Tailed Bumblebee	Parasitic Wasp
##	183	285
##	Honey Bee	(Other)
##	667	670

Answer: Besides the "other" category, the six most commonly studied insects are the honey bee (667), parasitic wasp (285), buff tailed bumblebee (183), carniolan honey bee (152), bumble bee (140), and italian honeybee (113). These six species are all pollinators and our food systems rely heavily upon them to pollinate crops.

8. Concentrations are always a numeric value. What is the class of Conc.1..Author. column in the dataset, and why is it not numeric?

```
#Check data type
data.class(Neonics$Conc.1..Author.)

## [1] "factor"

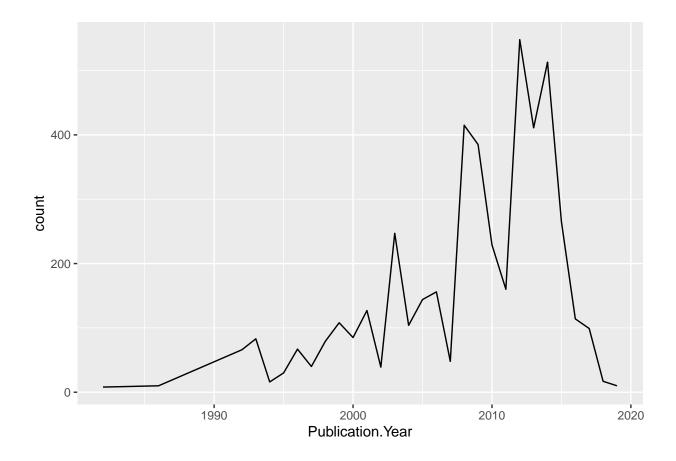

#Data type is factor
```

Answer: Conc.1..Author is a factor because when we imported the data, we asked R to read strings as factors. Conc.1..Author was originally imported as a character value because there are characters in it (ex."NR/" appears multiple times).

Explore your data graphically (Neonics)

 $9. \ \ Using \ {\tt geom_freqpoly}, \ generate \ a \ plot \ of \ the \ number \ of \ studies \ conducted \ by \ publication \ year.$

```
#Frequency chart of studies by publication year
library(ggplot2)
ggplot(data=Neonics) +
  geom_freqpoly(aes(Publication.Year),stat="count",group='Publication.Year')
```

10. Reproduce the same graph but now add a color aesthetic so that different Test.Location are displayed as different colors.

```
#Frequency chart of studies by publication year with test.Locations
ggplot(data=Neonics) +
  geom_freqpoly(aes(Publication.Year,color=Test.Location),stat="count",group='Publication.Year')
```

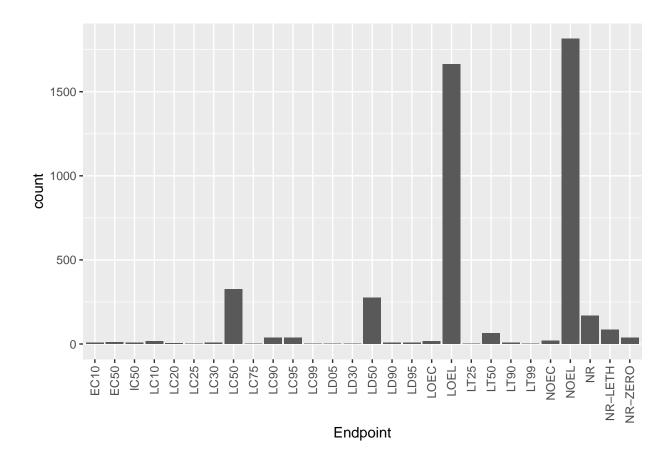

Interpret this graph. What are the most common test locations, and do they differ over time?

Answer: The most common test locations have been Lab and Field Natural. The two have generally alternated as the most common types over time. However, Lab tests have dominated consistently since 2010.

11. Create a bar graph of Endpoint counts. What are the two most common end points, and how are they defined? Consult the ECOTOX_CodeAppendix for more information.

[TIP: Add theme(axis.text.x = element_text(angle = 90, vjust = 0.5, hjust=1)) to the end of your plot command to rotate and align the X-axis labels...]

```
#Bar graph of Endpoint counts:
ggplot(data=Neonics) +
  geom_bar(aes(Endpoint), stat="count", group='Endpoint') +
  theme(axis.text.x = element_text(angle = 90, vjust = 0.5, hjust=1))
```

Answer: The two most common end points are LOEL and NOEL. LOEL means "lowest observeable effect level" and NOEL means "No observable effect level."

Explore your data (Litter)

12. Determine the class of collectDate. Is it a date? If not, change to a date and confirm the new class of the variable. Using the unique function, determine which dates litter was sampled in August 2018.

```
#Check data type:
data.class(Litter$collectDate)

## [1] "factor"

#collectDate is a factor
#Change collectDate to a date:
library("lubridate")

##
## Attaching package: 'lubridate'

## The following objects are masked from 'package:base':
##
## date, intersect, setdiff, union
```

```
Litter$collectDate<-ymd(Litter$collectDate)
Litter$collectDate</pre>
```

```

#Verify collectDate is a date:
data.class(Litter$collectDate)
```

[1] "Date"

```
unique(Litter$collectDate)
```

[1] "2018-08-02" "2018-08-30"

#Litter was sampled on August 2,2018 and August 30,2018

13. Using the unique function, determine how many plots were sampled at Niwot Ridge. How is the information obtained from unique different from that obtained from summary?

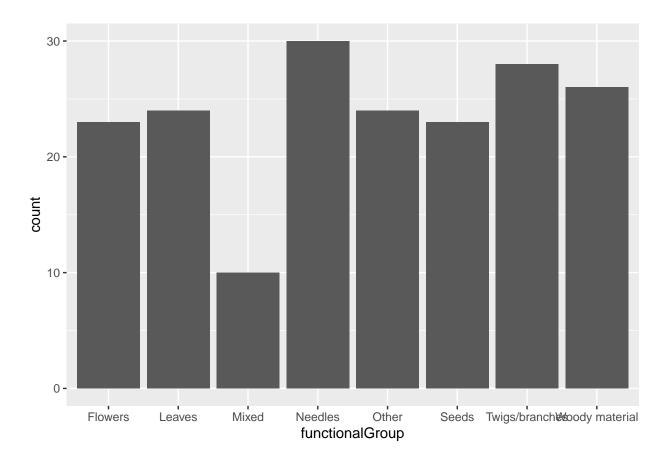

```
length(unique(Litter$plotID))
```

[1] 12

Answer:12 plots were sampled at Niwot Ridge. The 'unique' function determines how many unique values are in a list whereas the 'summary' function determines how many times each value repeats in a list.

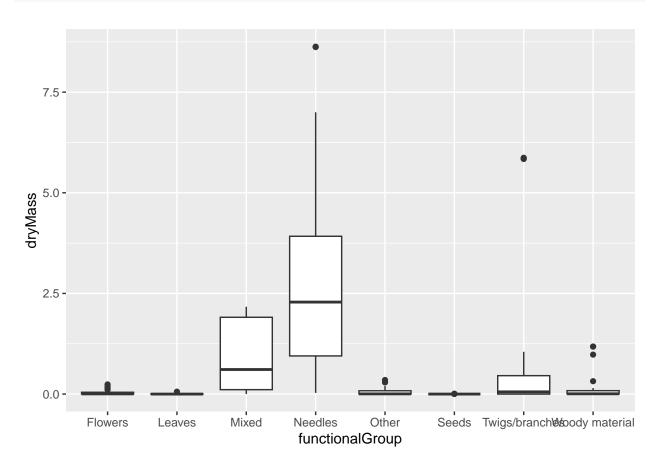

14. Create a bar graph of functional Group counts. This shows you what type of litter is collected at the Niwot Ridge sites. Notice that litter types are fairly equally distributed across the Niwot Ridge sites.

```
#Bar graph of functionalGroup counts
ggplot(data=Litter) +
  geom_bar(aes(functionalGroup),stat="count",group='functionalGroup')
```

15. Using geom_boxplot and geom_violin, create a boxplot and a violin plot of dryMass by functional-Group.

```
#Boxplot:
ggplot(data=Litter) +
geom_boxplot(aes(x = functionalGroup, y = dryMass))
```

```
#Violin plot:
ggplot(data=Litter) +
geom_violin(aes(x = functionalGroup, y = dryMass))
```

Why is the boxplot a more effective visualization option than the violin plot in this case?

Answer: A boxplot shows the interquartile range, helping us to observe the distribution of dry mass. The violin plot just shows the spread of values.

What type(s) of litter tend to have the highest biomass at these sites?

Answer: Needles and "Mixed" litter have the highest biomass. Twigs/ branches has outliers on the higher range but overall its median dry mass is much lower than Needles and "Mixed".
